

## **FiberTEK Insulation to Locate Manufacturing Facility in Nephi, Utah**

### **Facility Will Create New Opportunities for Local Labor and Area Commerce**

SALT LAKE CITY, UTAH, August 17, 2007 – FiberTEK Insulation, LLC, a privately held company, announced today that it has received an incentive package offered by the State of Utah for the construction of a fiberglass insulation plant located in Nephi, Utah. The central Utah location will provide FiberTEK with the ability to service the Western US building industry with a wide range of premium insulation products.

“We appreciate the commitment demonstrated by the State of Utah and local community for us to locate here in Utah,” said Jordan Radman, President of FiberTEK Insulation, “The information we recently received from the State coupled with our analysis of competing locations has led us to commit to Nephi, Utah. We’ve found the Economic Development Corporation of Utah, State of Utah and the Juab County Economic Development Organizations to be progressive and professional organizations that have effectively portrayed the quality of the people of Utah and the quality of the business climate in Utah. We certainly look forward to being a respected and contributing business to the Nephi community.”

The 300,000 sq. ft. facility, with completion planned in late 2008, will use state of the art manufacturing equipment, and will have around 100 employees, including managers, plant maintenance personnel, engineers and production associates. FiberTEK is committed to the success of their employees by offering excellent health, pay, retirement benefits and career opportunities in a stable and stimulating industry.

The Nephi plant will be the second facility built and owned by FiberTEK and demonstrates the company’s commitment to their customers and to help America conserve energy. According to the US Department of Energy (DOE), 60% of homes are under insulated. “We want homeowners to know that by upgrading existing or new construction insulation systems, they will recognize significant savings on their energy bills and contribute to the improvement of our environment. A recent study has found that insulation is the single most cost-effective way to cut greenhouse gas emissions,” said Jordan Radman, President of FiberTEK Insulation.

FiberTEK is owned by the Radman families who have been involved in the production of insulation for over 40 years and have market leading technology in the manufacturing of fiberglass. FiberTEK sells equipment and technology worldwide and will use the new Utah facility as its latest showcase. FiberTEK currently has a facility in central Florida that sells fiberglass insulation into the Eastern States residential, commercial and industrial markets.
